## 25) Interview with Associate Professor of Cybermedia Center, Kiyokawa Kiyoshi

### [Enjoy the Challenge!]

Hello!  
[Gatchan! Staff] SE.

We will send an interview with the Cybermedia Center Mr. Kiyokawa Kiyoshi!

### Associate Professor, Cybermedia Center, Kiyokawa Kiyoshi

**Program staff SE** (below, **S**): Today you for coming from a distant place, Thank you!

**Dr. Kiyokawa** (hereinafter **Kiyokawa**): No, no. It was fun.

**S**: Dr. Kiyokawa the VTR time I hear a very close relationship with Dr. Christian Sander appeared to us, and videophone. In fact, "Dr. Kiyokawa means the studio!" I'm going to introduce us to Himself Dr. Thunder! Mr. Sander, but it is a very casual way.

**Kiyokawa**: Yes. Science Council to meet in, I've come to greet the Japanese always gag. Video calls his "year and why?" I was told, Here is "I want to and why?" It's like (laughs)

**S**: The Science Council, do you? ? It is somewhat interesting scene.

**Kiyokawa**: But, the neighborhood is "溶Ke込Mou different culture," it is also an indication of willingness on. When I first came to Japan

## バックナンバー

[February 2011](#)

[January 2011](#)

"I wonder how I get to be frank," I thought I would.  
I was also very high communication skills.  
As a researcher, I think very important.

[December 2010](#)

[November 2010](#)

**S:** Well, just shut up than their own,  
You'd like to communicate with various people who balanced.

[October 2010](#)

**Kiyokawa:** a research phase out the idea stage to embody it, and  
tell the people level,  
From this point but maybe it might not be the work of  
researchers,  
I think there are steps people have used it.  
Thinking, making, to tell people.  
Respectively, but it is still important.  
Chris is the ability of the three, none too high.

[September 2010](#)

[August 2010](#)

[July 2010](#)

[June 2010](#)

[May 2010](#)

**S:** The teacher Kiyokawa, AR rather than the technology itself  
I'm an expert on AR is to leverage the development of the display?

[April 2010](#)

**Kiyokawa:** Yes.

[March 2010](#)

The technology is now called the "tunnel vision", but I also said  
that,  
End, so different from the peephole but saw limited scope is not  
see.

[February 2010](#)

What human being, just like you can see the front side without.  
作Ritaku to feel like a different kind all around the world,  
I've been trying.  
Using new technology, AR and I want to help it spread.

[January 2010](#)

[December 2009](#)

[November 2009](#)

**S:** to study hard or they are just mean?

**Kiyokawa: Is** that really the most technically difficult, so "what is  
happening around me"

"I think that what people want to use" us to detect,  
"Kiku system of care" that I make.

If you are not hungry, when I show the location of the restaurant  
is always "I do not need that information right now ..." I really felt.  
If you are looking for right now there are CD,  
I'm glad the CD from the restaurant who has a shop display.  
Such is also to say anything, you can see without typing at the  
keyboard

"Now you will be looking for a CD," read the mind and  
Automatically shows you the CD shop.

If you are tired, "I have a coffee shop meters ○" and shows you.  
Actually, I thought trying to display information to help people  
"What's the best thing to put on something" I do not know and  
that does not make sense.

Really like to see if there is another, unrelated yours superimposed  
on the video,

It is the only way I have.

So to recognize the state of technology and human needs are  
inextricably linked with what we need.

**S:** Oh, yes indeed!

As entertainment, "play" If there is a clear purpose and use it  
might be a good display and enjoy wearing simple,  
You Tose blend into everyday thinking,  
"Mind reading technology," it is that it is essential.

**Kiyokawa:** That's right.

When using a mobile, but only after Okemasu out gone,  
If you are using a glasses wearing,  
It is also not possible to spend a day in the city wore out.  
And intelligent machines that would not change the functionality  
without permission to read the user's own feelings and  
circumstances,  
I could not become rather difficult to use.

**S:** Finally, a thank you message to the students.

**Kiyokawa:** have a challenging spirit, I hope you enjoy the challenge and that.

Despite difficulties in escaping from there, not the contrary and enjoy it.

That way, I think that opens it never would have guessed the world.

**S:** Thank you very much!

### **Everyone applauded the teacher's self-introduction in Japanese, Thunder!**

In the show could not have introduced this time, in fact, have been developed by the display itself all the way from Osaka, teachers, Kiyokawa,

They will be of you experienced students, "Wow!" "Fun!" And was very popular.

This technology not just for one day is really just want to enjoy the day came rather to blend into everyday life.
